Sika® Florseal WB-18 & -25

WATER-BASED ACRYLIC CONCRETE CURE AND SEAL

	and seal. They are applied to film that retains mix water allo greatly reduces dusting and inc Sika® Florseal WB-18 is an eco Type 1, Class A. Sika® Florseal V	new concrete substrates a wing normal hydration. Th reases stain resistance of t nomical cure and seal tha WB-25 is a premium grade be 1, Clear and the alkali res	ased, clear, high gloss, non-yellowing, acrylic emulsion cure after the final finishing operations are completed to form a is film remains as a protective surface sealing treatment that he cured concrete. Product is available in two solids contents: t meets the moisture retention requirements of ASTM C309 , high build, cure and seal that meets the moisture retention sistance, acid resistance, adhesion-promoting qualities and UV A.		
Where to Use	 For application on vertical, horizontal, smooth or textured, concrete substrates. Suitable for curing and sealing plain concrete and concrete surfaces treated with non-metallic, dry shake floor hardeners and topping courses. Suitable for interior or exterior concrete floors, pavements, sidewalks and structures. UV stable. Applications to existing concrete surfaces as economical, water clear, protective sealing treatments. Applications where solvent-based products cannot be used because of health and safety reasons. 				
Advantages	 Excellent moisture retention produces a durable concrete surface through optimum curing. Reduces dust on new and existing concrete substrates by forming a film that seals the surface. Protective sealer that resists some mild acids, alkalis and oils that may damage concrete. Increases stain resistance and cleanability by sealing the surface pores. Protects against damage from sudden rainfall. Easy application, one coat effectively cures and seals concrete surfaces. No additional burlap or polyethylene sheeting is required. Sika® Florseal WB 25 passes the adhesion requirements of ASTM C1315 Type 1, Class A standard that evaluates the compatibility of the sealer with common adhesives. Specifically, ceramic tile adhesives to the requirements of specification ANSI A136.1-1992 and vinyl tile adhesion to the Resilient Floor Covering Institute specification ADH-1. Meets the requirements of CFIA and USDA for use in food plants. Ministère des Transports du Québec acceptance. 				
	 Sika[®] Florseal WB 25 passes the compatibility of the seal specification ANSI A136.1-19 Meets the requirements of C Ministère des Transports du C 	ler with common adhesive 92 and vinyl tile adhesion t FIA and USDA for use in foo Québec acceptance.	es. Specifically, ceramic tile adhesives to the requirements of the Resilient Floor Covering Institute specification ADH-1. bod plants.

HOW TO USE												
Application	Stir well prior to use, ensuring thorough agitation and distribution of any settled material throughout the liquid. Wher necessary, use a paint straining mesh or fabric to collect any material which has formed a surface skin; the presence of which is a consequence of reaction during packaging and is not representative of any reduction in product quality. Appl by spray, brush, long nap roller, or lambs wool applicator. For best results, Sika Canada recommends a low-pressur garden-type sprayer with neoprene hoses. Apply uniformly to form a continuous film.											
	 Curing New Concrete: Application should be made immediately following the final finishing operations as soon as the "sheen" of bleeding water on the surface has disappeared and slab can support the weight of an applicator. Sealing New Concrete: For an excellent sealer and added protection to concrete cured with Sika® Florseal WB-18 & -25 apply a second coat after 28 days of curing. If not previously applied when curing concrete, apply two coats, second coat four hours after first coat. Area to be sealed must be cleaned and free of all foreign matter such as dirt, rubber marks paint, etc. Apply product at 7.4 to 9.8 m²/L (300 to 400 ft²/US gal.) to dry surface. Dustproofing / Sealing Aged Concrete: Defective mortar, open joints and spalling should be repaired. Surface must be structurally sound and free of foreign matter such as grease, oil, dirt, and incompatible sealers and coatings. Degreas and remove rubber tire marks followed by a thorough rinse with clean water. Apply product to dry surface at 7.4 to 9.8 m²/L (300 to 400 ft²/US gal.) to coat is necessary for maximum protection. Appl after 4 hours drying time at 7.4 to 14.7 m²/L (300 to 600 ft²/US gal.). 											
							Coloured Concrete: New or existing concrete, best results are obtained with Sika [®] Florseal WB-18. Wait a minimum 72 hours after concrete placement to apply sealer. Existing concrete (minimum 28 day old) surfaces can be sealed wi either Sika [®] Florseal WB-18 or Sika [®] Florseal WB-25. Do not over apply sealer, use coverage rates list above und "Sealing New" or "Sealing Aged Concrete". Test samples are recommended to confirm an acceptable result.					
							Clean Up	Prior to drying; equipm	ent can be cleaned with soap a	nd water.		
	Care of Sprayer	When not in use, releas	se air pressure from spray can,	keep hose and nozzle elevated	to drain away from tip.							
Limitations	 Note: Sika® Florseal WB-18 & -25 are designed as an initial curing and sealing treatment only, not as a long lasting traffic bearing coating. Maintaining the initial glossy appearance on smooth concrete surfaces may require periodic recoating in the heavy traffic areas. Do not use Sika® Florseal WB-18 & -25 on floors treated with wax or on surface where a solvent-based cure and sea agent is still present. Not recommended for sealing metallic aggregate hardened floors. Protect from freezing. Do not apply if concrete temperature is below 4 °C (40 °F). Test panel applications should be made prior to general application on exposed aggregate, concrete block, stone precast, coloured concrete, etc to determine acceptability. Not suitable for continuous immersion in water or around pools and fountains. May not provide bond for cementitious or other adhesives. Sika Canada recommends that a test trial be performed by the adhesive manufacturer or overlayment applicator prior to general application. Do not dilute or alter the product in any way. Use in well ventilated areas. 											
Health and Safety Information	For information and advice on the safe handling, storage and disposal of chemical products, users should refer to the most recent SAFETY DATA SHEET containing physical, ecological, toxicological and other safety-related data. KEEP OUT OF REACH OF CHILDREN FOR INDUSTRIAL USE ONLY The Information, and in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions, within their shelflife. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of finess for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any precommendations, or from any other advice offered. The information contained herein does not relieve the user of the products to our current therms of sala and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request or may be downloaded from our website at: www.sika.ca SIKA CANADA INC.
