

FINE GROUT DIVISION 04

CELLFILLER E-30

FEATURES & BENEFITS

- » Expands during its plastic phase
- » Superior adherence
- » Factory calibrated mix
- » May be poured or pumped
- » Superior flow and performance characteristics

USES

- » Ideal for filling concrete blocks cores and other cavities when controlled expansion is needed
- » Can be used indoors and outdoors
- » Ideal for any application requiring a uniform flow, in addition to being expansive to compensate for shrinkage generally observed with the use of conventional grouts

LIMITATIONS

- » CELLFILLER E-30 cannot be used for laying masonry units. In this case, refer to KING mortars
- » Never add additives on-site to modify setting time, fluidity or any other property of the plastic or hardened grout
- Use only the recommended amount of water in order to obtain the desired properties of the plastic or hardened grout

CELLFILLER E-30 is a pre-mixed, pre-bagged grout specially designed for filling cells and other cavities when laying concrete blocks. This grout is composed of cementitious materials, masonry sand and other carefully selected components. CELLFILLER E-30 complies with Table 7 of CSA-A179-14 for Fine Grout with addition of water.

MIXING

Mix a maximum of 4.5 L (1.2 US gallons) of potable water per 30 KG (66 lb) of CELLFILLER E-30 in a clean mortar mixer. Pour 4.0 L (1.0 US gallon) of water into the mixer and add 30 KG (66 lb) of CELLFILLER E-30. Mix for 5 to 10 minutes. Allow the grout to rest for a short period of time. Using the remaining water, adjust the grout to obtain the desired consistency.

PLACEMENT OF GROUT

The placement of the grout must meet the requirements of Sections 6 and 8 of CSA-A371-14.

Make sure the masonry application has hardened sufficiently before placing the grout. If multiple pours are required, leave a 25 mm (1") to 75 mm (3") gap on top of the previous row to produce a key effect between pours.

Never use the grout if the cells are saturated with water.

Never use grout on frozen surfaces.

Pour the mixed product, on-site, within 15 minutes of mixing.

FINE GROUT DIVISION 04

CELLFILLER E-30

PACKAGING

This product is packaged in 30 KG (66 lb), triple-lined bags or bulk bags, wrapped on wooden pallets.

STORAGE AND SHELF LIFE

Always store in a dry area, protected from the weather. On-site, an additional tarpaulin must be used to cover the product to prevent water infiltration. Unopened, properly stored bags have a shelf life of 12 months.

SAFETY PROCEDURES

This product is made of Portland Cement. Wearing safety equipment used for the handling of cement-based products is therefore recommended: rubber gloves, dust mask and safety glasses. Safety Data Sheets can be provided upon request.
