Sikadur®-30
HIGH MODULUS, HIGH STRENGTH, STRUCTURAL EPOXY PASTE ADHESIVE
FOR USE WITH Sika® CarboDur® REINFORCEMENT SYSTEM

Description
Sikadur®-30 is a two-component, 100% solids, moisture-tolerant, high modulus, high strength, structural epoxy paste adhesive. Meets ASTM C881 and AASHTO M-235 requirements.

Where to Use
- Adhesive for bonding external reinforcement to concrete, masonry, steel, wood, stone, etc.
- Structural bonding of composite laminates (Sika® CarboDur® CFRP) to concrete, brickwork and timber.
- Structural bonding of steel plates to concrete.
- Suitable for use in vertical and overhead configurations.
- Multi-purpose, high strength, structural epoxy paste adhesive.
- As a binder for epoxy mortar repairs.
- Designed for use at normal temperatures between 8 and 35 °C (46 and 95 °F).

Advantages
- Long pot life and open time.
- Moisture tolerant before, during and after cure.
- High modulus, high strength, structural paste adhesive.
- Excellent adhesion to concrete, masonry, metals, wood and most structural materials.
- Fully compatible and excellent adhesion to Sika® CarboDur® CFRP composite laminates.
- Paste consistency ideal for vertical and overhead applications.
- High creep resistance under permanent loads.
- High abrasion and shock resistances.
- Convenient easy mix ratio A:B = 3:1 by weight.
- Solvent-free.
- Colour coded components to ensure proper mixing control.
- Canadian Food Inspection Agency accepted.
- Approved by the Ministère des Transports du Québec.

Yield is based on a 3 mm (1/8 in) nominal thickness and does not take into consideration the plane, roughness of substrate as well as laminate crossings. Actual consumption of adhesive will then be higher.

Shelf Life
2 years in original, unopened packaging. Store dry at 5 to 32 °C (41 to 89 °F). Condition product to 15 to 24 °C (59 to 75 °F) before using. A:B = 3:1 by weight and by volume.

Properties at 23 °C (73 °F) and 50 % R.H.

HOW TO USE
Surface Preparation
Surface must be clean and sound. It may be dry or damp, but free of standing water and frost. Remove dust, laitance, grease, curing compounds, impregnations, waxes, foreign particles, disintegrated materials, and other bond inhibiting materials from the surface. Existing uneven surfaces must be filled with an appropriate repair mortar (i.e. Sikadur®-30 with the addition of 1 part silica sand). The concrete adhesive strength must be verified after surface preparation by random pull-off testing (ACI 503R) at the engineer’s discretion. Minimum tensile strength: 1.5 MPa (218 psi) with concrete substrate failure.

Planeness of substrate to be checked with a metal batten. tolerance for 2 m (6.5 ft) length max. 10 mm (3/8 in), or 2.5 mm (3/32 in) for 50 cm (20 in) length respectively.
Concrete: Blast clean, shotblast or use other approved mechanical means to provide an open roughened texture. (CSP 5)
Steel: Sandblast to white metal finish.
Timber: Blast clean or grind. After cleaning, remove all dust from the surface with an industrial vacuum cleaner.
CarboDur®: Surface should be wiped clean using an appropriate cleaner. Using a clean white cloth wipe down the side receiving adhesive (this side is not labeled) with acetone until all residual carbon dust is removed (i.e. the white cloth remains white after wiping the laminate). In the case where the design requires “stacking” of the strips, the bottom surface of the strip (labeled) should be lightly sanded (emery paper type 180) and cleaned as above prior to the application of the second strip.

Mixing
Pre-mix each component. Proportion 1 part of component B to 3 parts of component A by volume into a clean pail. Mix for three (3) minutes using a low-speed drill (300 - 450 rpm) to minimize air entrapment. Use a Exomixer® type mixing paddle (recommended model). During the mixing operation, scrape down the sides and bottom of the pail with a flat or straight edge trowel at least once to ensure thorough mixing. Upon completion of mixing, Sikadur®-30 should be uniform in colour. Mix only that quantity you can use within its pot life.

Application
For bonded, external reinforcement: Apply the neat mixed Sikadur®-30 onto the concrete with a trowel or spatula to a nominal thickness of 1.5 mm (1/16 in). Apply mixed Sikadur®-30 onto the CarboDur® laminate with a “roof-shaped” spatula to a nominal thickness of 1.5 mm (1/16 in). Within the epoxy open time and depending on the temperature, place CarboDur® laminate onto the concrete surface. Using a hard rubber roller, press the laminate into the epoxy resin until the adhesive is forced out on both sides. Remove excess adhesive. Glue line should not exceed 3 mm (1/8 in). The laminate must not be disturbed for a minimum of 24 hours. The epoxy will reach its design strength after 7 days.

For vertical and overhead patching: Work Sikadur®-30 with the addition of 1 part oven dried sand into the prepared substrate, filling the cavity. Strike off level. Lifts should not exceed 25 mm (1 in).

Clean Up
Clean all tools and equipment immediately with Sika® Epoxy Cleaner. Once hardened, product can only be removed mechanically. Wash soiled hands and skin thoroughly in hot, soapy water.
### Limitations
- Minimum substrate and ambient temperature: 5 °C (41 °F).
- Maximum substrate and ambient temperature: 35 °C (95 °F).
- Do not thin: Solvents will prevent proper cure.
- Use oven-dried aggregate only.
- Maximum glue line of neat epoxy: 3 mm (1/8 in).
- Maximum epoxy mortar thickness: 25 mm (1 in) per lift.
- Material is a vapour barrier after cure.
- Minimum adhesive strength of concrete substrate: 1.5 MPa (218 psi).
- Minimum age of concrete must be between 21 and 28 days, depending upon curing and drying conditions.
- Porous substrates must be tested for moisture-vapour transmission prior to mortar applications.

### Health and Safety Information
For information and advice on the safe handling, storage and disposal of chemical products, users should refer to the most recent SAFETY DATA SHEET containing physical, ecological, toxicological and other safety-related data.

**KEEP OUT OF REACH OF CHILDREN**
**FOR INDUSTRIAL USE ONLY**

The information, and in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika's current knowledge and experience of the products when properly stored, handled and applied under normal conditions, within their shelflife. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any recommendations, or from any other advice offered.
