carbon oxides

Further information : Containers may rocket or explode in heat of fire.
Keep containers cool by spraying with water if exposed to fire.
Vapours are heavier than air and may accumulate in low areas and travel a considerable distance up to the source of ignition.
Collect contaminated fire extinguishing water separately. This must not be discharged into drains.
Run-off water from fire may cause pollution.
Contaminated extinguishing water must be disposed of in accordance with official regulations.

Special protective equipment for fire-fighters : Firefighters should be equipped with self-contained breathing apparatus and turn-out gear.

Use personal protective clothing.
Avoid contact with the skin, eyes and clothing.

Environmental precautions : Prevent spread over a wide area (e.g. by containment or oil barriers).
Contain contaminated water/firefighting water.
Do not discharge into drains/surface waters/groundwater.

Methods and materials for containment and cleaning up : Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13).

SECTION 7. HANDLING AND STORAGE

Advice on protection against fire and explosion : Keep away from open flames, hot surfaces and sources of ignition.
Take necessary action to avoid static electricity discharge (which might cause ignition of organic vapors).
Use only explosion-proof equipment.
Vapours are heavier than air and may accumulate in low areas and travel a considerable distance up to the source of ignition.

Advice on safe handling : Keep away from sources of ignition - No smoking.
Take precautionary measures against static discharges.
